CHIP PACKET PROJECT

Brought to you by
CPP St Heliers Bay
in partnership with
St Philip's Anglican
Church of St Heliers

 St Philip's

Helping the Homeless

We are making survival blankets for those living on the streets this winter and have partnered with the Auckland City Mission to get these sheets to where they are most needed.

Taking Foil Packets

A chip packet can take 80 years to decompose. Turning them into something useful reduces waste and provides comfort to those in need. Each survival sheet uses 44 chip packets. That's 3520 recycling years!!

Adding Fusion Heat

Using a little bit of heat from an iron fuses the foil packets in strips together that are then sandwiched between two sheets of 'single use' plastic to make a survival sheet.
